

LIQUID FERTILISER

Outcast Liquid

For application to amenity turf in order to acidify the top layers of soil. It has been shown that surface soil casts are significantly reduced or even eradicated on lower pH soils. Soil casting causes unsightly turf, poor ball roll, machinery blade damage, weed encroachment and increased turf disease risk. Applications of OUTCAST are designed to solve the soil cast problem.

APPLICATION RATE :

Apply at 20litrs / ha in 500 litres of water / ha.

Ideally the first application should be made 1 to 2 weeks before expected problems occur.

Allow a week after application to see first signs of effects.

Monitor the areas and at first sign of reoccurrence of problems a second application of 10 litrs / ha in 500 litres of water / ha can be made.

HEALTH & SAFETY:

Wear protective gloves/clothing/eye protection/face protection. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do so. Dispose of contents/container according to local and national provisions for hazardous waste. Avoid breathing vapour/spray. Use only outdoors or in a well ventilated area.

Notice: Buyer assumes all responsibility for safety and use not in accordance with directions.
