

Bullseye Spray Indicator + Anti Drift

A water-soluble spray tank additive designed to add colour to tank mixes including an anti drift agent allowing for precise and consistent product application

Turf maintenance products such as fertiliser and chemical agents require accurate application to maximise their effectiveness. By using Prestige Bullseye, precise and consistent application of products can be easily achieved.

The risk of overlapping or missing areas is alleviated by giving the spray a visible blue colour, which temporarily colours sprayed areas. Prestige Bullseye also allows for easy identification of any blocked nozzles and minimises spray drift by incorporating an anti drift agent within the formulation.

Features and Benefits

- Prevention of the possibility of scorching and/or other damage to the plant which can occur if products are over-applied through spray overlap (known as 'double dosing').
- Anti drift agent ensures accurate application to avoid treatment of non-target areas.
- Ensures all required areas are covered without the need for costly and time-consuming additional sprays.
- Any clogging of sprayer nozzles can be quickly and easily identified through irregular spray patterns.
- Reduces the risk of spray drift through easy identification of the spray pattern.
- The product is completely non-toxic, non-corrosive and harmless to animals and the environment.

Application Rates

Prestige Bullseye is a blue indicator dye that is specifically formulated for use with pesticides, liquid fertilisers and other speciality sprays. Bullseye is compatible with boom sprayers, knapsacks, pedestrian push sprayers and hand lances. The blue colouring of surfaces will last for approximately 24 – 48 hours depending on rainfall and/or irrigation levels.

Application Guidelines:

The quantity of Bullseye is related to the total water volume in the spray tank. Use at a rate of 200-500ml per 200lts water volume.
